## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 19-23 rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The claims listed supra specifically claim 20 recites the following “in the presence of a hydrolytic enzyme, wherein the enzyme does not catalyze any reaction with a bond connecting any acyl, alkyl or alkenyl group to the hydroxy fatty acid or hydroxy fatty acid C<sub>1</sub> - C<sub>4</sub> alkyl ester.”

This description is considered to be new matter since the specification as originally filed states the following “a hydrolytic enzyme, said enzyme having the capability of catalyzing ester formation between the carboxylic group of the HFA-derivative and the ending hydroxyl group of POAG or POAG- 15 derivative, without catalyzing any reaction with existing ester or ether bond on the O-aryl/alkyl/alkenyl-HFA (or corresponding derivative).” The hydrolytic enzyme as described in the

Art Unit: 1621

specification must meet specific requirements that are contrary to those recited in the claim 20.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim 19 rejected under 35 U.S.C. 102(b) as being anticipate by Janssen et al.

Janssen et al. teaches a process of lipase-catalyzed synthesis of oleic acid esters of polyethylene glycol 400. The hydrolytic enzyme used does not affect any existing ester bond. It should be noted the polyethylene glycol 400 reads on the instant invention based on applicant's definition of applicable POAG listed on page 6.

***Allowable Subject Matter***
